

INTRODUCING THE NEW MILAN ADVANCED CERTIFICATION PROGRAM

AVNU ALLIANCE

MILAN ADVANCED CERTIFICATION PROGRAM

Milan is a standards-based deterministic networking protocol for real time media, created and maintained by Avnu Alliance. Milan-Certified devices work together at new levels of convenience, reliability, and functionality.

It's here: Faster, easier, more convenient, and less expensive testing and certification of Milan end devices. Under a new, streamlined program, third party certification labs around the globe have been authorized to perform Milan certification testing, ensuring conformance with specifications and guaranteeing interoperability.

Interoperability ultimately accelerates a broader ecosystem of devices: Certification is the first step to enabling this.

Milan Certification guarantees seamless interoperability with all other Milan-Certified devices and Avnu-Certified switches in the signal chain, regardless of function or manufacturer.

The Milan Advanced Certification Program is a viable platform for future-proofed, scalable networked media that evolves with the market's requirements and creates a foundation for the future.

WHAT'S NEW?

The Milan Advanced Certification Program is the first of its kind in the AV industry: an open, third-party, independent certification for media networking, now advanced for a more streamlined user experience.

The certification platform, built to support the Milan ecosystem, brings enhanced capabilities to Avnu members, including:

- > Easier, faster, more convenient certification testing for all Milan end devices including those with a small bridge port
- > Global access to test houses around the world
- > Competitive pricing for certification
- > New Avnu Express Test Tool for pre-certification validation
- > New Certified Product Registry that enables members' customers to easily search and filter for products to specify and design into systems.
- > Comprehensive Certification Management System (CMS) with simplified and intelligent certification workflows for a seamless, transparent certification process

AVNU ALLIANCE EXPRESS TEST TOOL: HOW IT WORKS

SAVE

**TIME,
MONEY,
& RESOURCES**

The **Avnu Express Test Tool**, a low-cost, pre-certification validation test tool from Avnu, verifies device performance to ensure that products conform with Milan specifications, making certification testing more predictable.

- > Lowers the barrier for certification
- > Provides valuable insights into the product that can be used to optimize product development
- > Floating licenses allow teams across geographic locations to collaborate
- > Bundled hardware/software packages available
- > Automatic updates as new test plans become available
